Difference Between Nvidia GeForce GTX and RTX

The Nvidia GeForce GTX is a graphic processing unit for gaming purposes, whereas the Nvidia GeForce RTX is a GTX graphic performing card.

The Nvidia GeForce GTX was launched in 2008 under the series 200 and later developed many processors. On the other hand, RTX was launched in 2018 as the best performing graphic card by the same Nvidia company, GTX, brewed.

The Nvidia GeForce GTX is suitable for games such as League of Legends, Starcraft, PUBG, Fortnite, and other Esport games for the best graphical experience. Meanwhile, Nvidia GeForce RTX provides the best performance in those games COD, Fortnite, Control, Cyberpunk Minecraft, and many other PC games.

The Nvidia GeForce GTX is known for Ultra-fast GDDR6 memory, which performs well in the long run. Albeit, the Nvidia GeForce RTX is renowned for best performing graphic card and also provides real-light simulation to gamers.

The Nvidia GeForce GTX is the first edition of generation 200, whereas; Nvidia GeForce RTX is a next-gen card.
